## Reglazing Proper Care and Maintenance

- Do not touch or use for at least 24 hours. The full cure time is 7 days. During this time period avoid cleaning and working in and around the tub area.
- Try to keep the temperature in the bathroom as warm as possible to insure that the finish will cure quicker and harder. This will minimize the odor and make the surface more durable.
- Use non-abrasive cleaners only, such as Lysol basin tub and tile cleaner and Dow bathroom cleaner. Use a **SOFT sponge only**. Use of these products will help maintain your bathtub's glossy finish.
- Check your plumbing periodically. A constant drip or leak will cause damage to any bathtub. If any plumbing work is needed, cover the bottom of the tub with a heavy blanket or drop cloth.
- Never use bathmats with suction or stick on appliqués.
- Avoid leaving shampoo bottles in the corners of your tub or tiles.

Please call us if you have any questions.
